

You're a professional, high volume,
high frequency discretionary trader
looking for an edge.

CYBORG SOLUTIONS

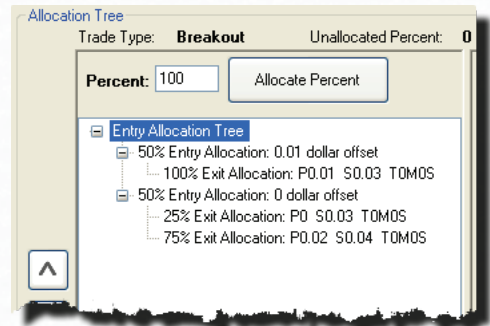

Cyborg is an add-on to your front end execution platform designed to bring seamless, custom automation to your trading.

No programming. No scripting. Just "Point and Click"

What is Cyborg? Cyborg brings automation to equity and derivative front-end trading platforms, without eliminating or replacing the individual trader. Cyborg is designed to be a real-time trading tool, bringing advanced risk management, increased execution speed and institutional-quality algorithms to the discretionary trader. An intuitive user interface allows traders to design sophisticated trading strategies without having to learn a complex scripting or programming language.

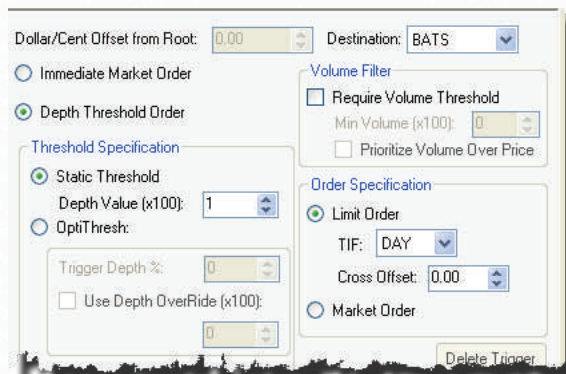

Create Custom Automated Strategies With The Allocation Tree

The Allocation Tree is a trade strategy template. Create a custom strategy once, and then use it repeatedly on different products, easily adjusting profit and risk parameters as well as trade size. The allocation tree allows for the unlimited customization of your strategies with the ability to split a single order into multiple entries, each with multiple exits.

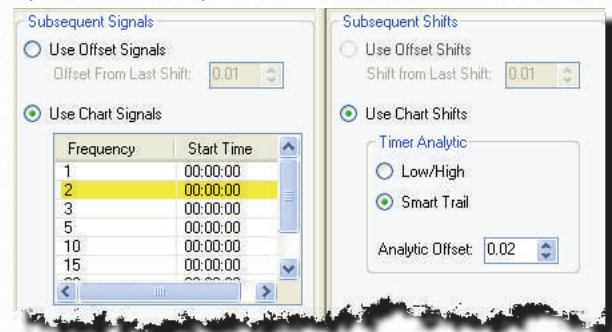

Smarter Entries & Smarter Stops

Execute your entries and stops based on market depth, volume or some combination of the two.

Advanced Trailing Strategies

Exit trades using custom trailing strategies based on price, charts, or proprietary Cyborg algorithms. Apply trailing strategies to both profit and stop orders.

Greater Flexibility

Automated strategies can be bound to customizable hotkeys, so you can hit a hotkey, place an order into the market and watch Cyborg launch your pre-defined strategy.

Launch Cyborg Strategies Through Your Current Front-End Platform

Launch an automated Cyborg strategy; then place a regular manual trade. Cyborg will automatically adjust the size of your strategy's profits and stops. Your discretionary trading can be used to manage your automated strategies.

Create Fully Automated Baskets

Create custom baskets where each product in the basket has a unique automated strategy associated with it. Product filters can be attached to each product, to prevent execution on a particular product in the basket if the bid/offer spread widens too much or specific volume criteria are not met. Create custom baskets from correlation lists or stock sector lists, ensuring that your baskets are always up to date.

exclude?	Product	Side	Allocation Type	Allocation Name	Size
<input type="checkbox"/>	MSFT	Buy	BREAKOUT	Agressive Breakout	400
<input type="checkbox"/>	INTC	Buy	COUNTER_TREND	Simple Fade	200
<input type="checkbox"/>	ORCL	Sell	BREAKOUT	Sample Strategy	1000
<input type="checkbox"/>	QQQQ	Buy	BREAKOUT	Agressive Breakout	200
<input type="checkbox"/>					100

Customizable Canned Algorithms

Employ institutional quality proprietary algorithms in your trading. Quickly and easily customize them to trading requirements and style. Choose from a growing list of specialized algorithms that range from a high-frequency rebate scalping algorithm called the "Shake" to a dynamic spread trading algorithm called "Smart-Spread".
